

Product Description

ZinClear®XP65 COCO+ LCT & TES is 65 wt% pre-dispersed Zinc Oxide in '**Coco-Caprylate/Caprates**' with Lecithin and Triethoxycaprylylsilane as the dispersants, and facilitates the formulation of mineral sunscreens.

This dispersion can be incorporated as the main UV filter into primary sunscreens to achieve high target SPF; alternatively, it can also be used in secondary sunscreens such as Lip Balms; Facial Moisturizers; Antiaging sunscreens/creams; Dry Oils; and cleansing products.

Coco-Caprylate/Caprates is a **lightweight, skin-compatible emollient** derived from coconut oil, offering excellent spreadability and a dry, non-greasy finish. Lecithin is a **naturally derived phospholipid** that acts as both a dispersant and **skin-conditioning agent**, and is **ECOCERT compatible**. Triethoxycaprylylsilane is a **silane-based surface modifier** that enhances particle dispersion stability and improves **water resistance** in formulations. It is **Non-Comedogenic** and **Hypoallergenic**.
